Professional Summary

Computer Science and Engineering (Cyber Security) undergraduate with hands on experience in full-stack Java application development. Adept at building secure backend systems, implementing authentication mechanisms, and mitigating application vulnerabilities. Demonstrated competitive problem-solving skills with a Top-20 finish at SIH and 2nd place at AEGIS Hackathon.

Education

SRM Institute of Science and Technology *2024 – 2028*
B.Tech in Computer Science and Engineering (Cyber Security) | CGPA: 8.10 / 10.00

St. Joseph's School, Gorakhpur *2021 – 2024*
Senior Secondary (Class XII) – 76.2% | Secondary (Class X) – 80.0%

Technical Skills

Languages: Core Java, Python, SQL, HTML5, CSS3, JavaScript (ES6+)
Frameworks & Tools: Spring Boot, Hibernate ORM, JDBC, Pandas, Numpy, RESTful APIs, Maven, React, Git, GitHub
DevOps & Cloud: Docker, Amazon Web Services (AWS), Linux (Kali/Ubuntu)
Core Computer Science: Data Structures & Algorithms, Relational Database Design, Computer Networks, Auth & Access Control

Projects

TaxSentinel – Intelligent Tax Reconciliation *Python, Pandas, scikit-learn, Streamlit*
Repository: https://github.com/Utkarsh172006/TaxSentinel_ps_2

- Built a GST reconciliation tool for the Fintechstico hackathon (Consilium'26, NSUT) that matches invoices against ledger entries, bank transactions and supplier lings
- Implemented data validation pipelines and relational database queries to process structured financial datasets securely.
- Engineered access control rules and data handling logic to ensure regulatory compliance and secure processing.

Stock Market Portfolio Management System *Java, JDBC, MySQL, HTML, CSS, JavaScript*
Repository: https://github.com/Utkarsh172006/DBMS_StockMarket

- Designed and deployed a full-stack financial application supporting real-time trade simulations, wallet operations, and portfolio tracking.
- Architected relational schemas (Users, Portfolios, Transactions) using MySQL and JDBC to enforce ACID properties and referential integrity across multi-table JOIN operations.

Secure Login System *Java, Cryptography (SHA-256), Security Logic*
Repository: https://github.com/Utkarsh172006/Secure_Login_System

- Built a secure authentication system using SHA-256 hashing to protect stored passwords and improve overall account security.
- Added failed login tracking and automatic account lockouts to detect repeated login attempts and prevent brute-force and credential-stuffing attacks.

Calendar Reminder System *Java, Data Structures*
Repository: https://github.com/Utkarsh172006/Calender

- Developed a console-based scheduling system with modular CRUD logic, input verification, and robust state persistence.

Achievements & Experience

- **Top 20 Finalist – Smart India Hackathon (SIH):** Shortlisted among top collegiate teams nationally for building software solutions under high-pressure competitive constraints.
- **2nd Place – AEGIS Inter-College Hackathon:** Secured runner-up position by building a functional prototype addressing domain-specific security challenges.
- **Software Engineering Virtual Experience – Commonwealth Bank (Forage):** Simulated real-world enterprise engineering workflows, focusing on feature design, security considerations, and system analysis.

Certifications

Oracle Cloud Infrastructure (OCI) AI Foundations Associate
Introduction to Critical Infrastructure Protection (ICIP)
DBMS Fundamentals & Advanced Concepts
Java (Basic) Certification – HackerRank
Python (Basic) Certification – HackerRank

Languages

English (Professional), Hindi (Native)
